| 18) For Booties: Shoe Length / Width        | _____ | 18. | _____ |

## How to Measure

We want your new jumpsuit to fit you as perfectly as you do. To this end, we must rely on you for accurate measurements and appropriate instructions. The way you measure will determine how your jumpsuit fits. Remember to measure over applicable clothing, calling our attention to specific fit instructions, significant body characteristics, or relevant flight concerns. If you want plenty of room for a hard arch for example, take measurements in that position and tell us you've done so in the comments section of your order form. Giving us your dress shirt size (neck & sleeve length), jacket size (chest & torso), and pants size (waist & inseam) helps us to validate your measurements and gives us some idea of how you like your clothing to fit. **If you have questions, give us a call.** We would prefer to prevent problems rather than fix them later. If you need your suit sized differently later, tell us the location and how much to increase or decrease the sizing. Since our patterns are computer generated, it is easy for us to modify your old pattern to your corrected specifications referencing your instructions.

## Our Guarantee

Our guarantee is simple, we guarantee the fit and the quality of all of our products. Here's how it works.

**Fit:** If your custom jumpsuit doesn't fit to your satisfaction, give us a call before you jump it. We will either alter or build you a new suit. Please call us for return authorization. We will instruct you how to specify your alterations

**Quality:** Our jumpsuits are guaranteed for the life of the product against defects in materials and workmanship. Damage due to wear and tear will be repaired at a reasonable cost.
